

IN THE SPECIFICATION:

Please amend the third paragraph following the heading “Detailed Description of the Preferred Embodiment” of the specification as follows:

In another of the preferred embodiments, seen in FIGS. 1-3, the wrapped bolster seal comprises at least two door panels, where one is a wet side door panel 8 and another is a dry side door panel 10 disposed opposite the wet side door panel 8; at least one rib 12 extending from the side of the wet side door panel 8 disposed proximate the dry side door panel 10; at least one edge layer 14 wrapped about a top edge of the wet side door panel 8 and extending at least partially along the side of the wet side door panel 8 disposed proximate the dry side door panel 10; and a foam-like material 16 extending from the dry side door panel 10. Preferably, as in the above-mentioned embodiment, the rib 12 extends from the wet side door panel 8 farther than the thickness of the wrapped layer 14. The foam-like material 16 can comprise any suitable or compliant surface for forming a proper seal.
